

MBIS Central Viewer

Convenient, robust system administration,
all in one place

A component of IDEMIA MBIS (Multi-Biometric Identification System), MBIS Central Viewer is a powerful tool for centralized management of biometric infrastructure within the MBIS suite. It allows system admins to monitor and troubleshoot critical system functions, manage user groups, and run reports.

MBIS Central Viewer provides authorized users access to system administration functions, allowing agency management of all of MBIS. This includes configuration of quality control logic and extended decision logic, allowing for agency management of workflows via the setting of various parameters. MBIS Central Viewer also provides extensive reporting capability to meet agency needs.

SYSTEM MONITORING

- System monitoring and detection of issues.

REMOTE ACTIONS

- Use remote diagnostics, messaging, and rebooting capabilities for offsite troubleshooting and issue resolution.

USER-FRIENDLY GUI

- Unified views of the entire biometric infrastructure by group, location, or agency, with the ability to drill down to view individual systems. Built to comply with applicable Section 508 requirements.

WORKFLOW DECISION LOGIC

- Easy, system-wide management of processes and policies, leading to cost-efficiency.

ACCOUNT MANAGEMENT

- Create and assign user groups, edit user privileges.

SOFTWARE UPDATES

- Manage updates, upgrades, and process changes.

REPORTING

- Powerful reporting tools, both standard out-of-the-box, and customized to meet agency needs.

Key Benefits

ALL-IN-ONE

Monitor, maintain, and configure the system, all from one place.

CONVENIENT

Conveniently update workflow changes and monitor system performance.

SIMPLE

Easily manage your database through data integrity monitoring and disk and services management.

EASY TO AUDIT

Efficiently perform audits and general reports on the operational status of your system.
