MBIS Reviewer

Application for reviewing and comparing biometric and demographic data

A part of the MBIS (Multi-biometric Identification System) client application suite, IDEMIA MBIS Reviewer provides an authorized user with the ability to display and process transactions from the home page. From here, users have access to intuitive and efficient tools to complete verifications, perform quality control, perform person/subject data maintenance, export data, and many other actions.

HOME PAGE
- Sort and filter a list of all active transactions in MBIS, open transactions for work, and view workflow history.
- Configurable, color-coded queues group transactions by type or status, allowing users to focus on the highest-priority tasks.

QUALITY ASSURANCE
- Analyze fingerprint, palmprint, face, iris, and tattoo data for quality, classification, and proper feature encoding.
- Edit and correct demographic descriptor data.
- Accept or reject transactions.

SEARCH VERIFICATION
- Side-by-side comparison of fingerprint and palm print images with extensive tools for positioning, adjusting, and enhancing the images.
- Automatic and highly accurate feature encoding.
- Automatically mate minutiae, align images, and view alternate images.
- Use charting tools for creating court presentations with annotations, ridge tracings, and zoom bubbles.

PERSON MANAGEMENT
- Maintain accurate person and incident records in MBIS and correct duplicates, mismatches, descriptor errors, sequence errors, and other anomalies.
- Locate a record in the MBIS database to view it, move it, delete it, change its ID, or print it.

RECORD COMPARISON
- Retrieve fingerprint, palm print, face, iris, signature, and tattoo records from the database and display images side-by-side for comparison.

Key Benefits

AUTOMATION
Workflows, quality decisions, match decisions, record consolidations, encodings, image alignment, and charting supported by automation.

CHARTING
Multiple charting options to support modern documentation practices.

CONFIGURABLE
Workflows, queues, and data elements may be configured to your agency needs.

OVERSIGHT
Manage the workload of a team of examiners.
